Guide to Archaeological Sites in the Mun River Basin

GLOSSARY

This Guide to archaeological sites in the Mun River basin contains a standard set of data on 206 sites located using the World War II aerial photographs of the Williams-Hunt Collection. For the purposes of this guide, a "site" is either a rectangular or irregular shape defined by positive vegetation marks, lines of plant growth which are visible on aerial photographs as anomalies in the natural terrain.

The irregular shapes are formed by vegetation growing on top of earthworks which partially or completely encircle past or present habitation mounds. Rectangular shapes are either just an outline of positive vegetation forming a regular quadrilateral or are a rectangular outline filled with standing water or vegetation with greater density than the surrounding landscape.

Each page of this guide contains data on one site. The page format is consistent, with a site plan box and five sections, as shown below.

! site !	1. Location data !
! plan box !	! !

! !	! !

Site plan box: The site plan box is a guide to interpreting the site as it appears on the Williams-Hunt Collection of aerial photographs. The outline in the box shows only the general scheme of the positive vegetation marks surrounding the site. The drawings vary in scale. Site size is indicated by the site area measurement listed under subsection 3.3. Where appropriate, rivers are stylized as a wavy line (e.g.).

Guide to Archaeological Sites in the Mun River Basin

The five headings and subsections are defined below.

-> 1. Location Data

1.1 Site number: All sites are located in four primary administrative divisions (changwats). The Royal Thai Soil Survey Department official number for each changwat is the first element of the site number. These are:

Nakhon Ratchasima	[20]
Buri Ram	[21]
Surin	[22]
Si Saket	[23]

The second element of the site number is the locator inside the changwat. For instance, 20-01 is the first example in Nakhon Ratchasima. The third element of the site number is a single letter referring to site shape, either "i" for "irregular" or "r" for "rectangular". The fourth element of the site number indicates the 1:250,000 Royal Thai Survey Department (RTSD, Series 1501S edition 1, 2516 BE [1973 AD]) map the site is located on. The four maps on which the sites are found are:

ND48-1	Changwat Chaiyaphum	15-16.00n x 102-103.30e
ND48-2	Changwat Ubon Ratchathani	15-16.00n x 103.30-105.00e
ND48-5	Changwat Nakhon Ratchasima	14-15.00n x 102-103.30e
ND48-6	Choam Khsan	14-15.00n x 103.30-105.00e

A sample site number is 21-02r.ND48-1. It is the second site in Changwat Buri Ram (21). It has a rectangular shape (r) and is on map ND48-1.

1.2 Ban: village or populated place

1.3 Amphoe: secondary Thai administrative division

1.4 Changwat: primary Thai administrative division

1.5 RAF Serial: Royal Air Force serial number, found on the lower left-hand corner of the photograph

1.6 RAF Sortie: Royal Air Force photographic reconnaissance mission. Sortie name reveals where the mission originated, as shown below.

FIC	flown out of Siagon
BN	flown out of Bangkok by RAF squadron 681 or 684
SIAM	flown out of Bangkok by RAF squadron 681 or 684

example: SIAM39 was the 39th mission flown out of Bangkok by Squadron 684

Guide to Archaeological Sites in the Mun River Basin

1.7 RAF Date: The date the sortie was flown.

1.8 L708 Map: example L708-5355II-RS230298

The first part of the entry refers to the 1:50,000 Royal Thai Survey Department topographical map series L708 (1960). The second part is the sheet number and the third is the grid reference. If no entry is listed, then the L708 series was not consulted for that particular site.

1.9 L7017 Map: example L7017-5439III-895610

The first part of the entry refers to the 1:50,000 Royal Thai Survey Department topographical map series L7017 (1976). The second part is the sheet number and the third is the grid reference. If no entry is listed, then the L7017 series was not consulted for that particular site.

1.10 Latitude: to the nearest minute north

1.11 Longitude: to the nearest minute east

-> Topography

2.1 Altitude: given in metres, taken from contour lines of 1:50,000 map

2.2 Terrace: Taken from the following maps of the Thailand Soil Survey Division:

Soil Map. 1974. Detailed Reconnaissance Soil Map of Surin Province & Detailed Reconnaissance Soil Map of Si Sa Ket Province. Soil Survey Division, Department of Land Development. Province series: No.19. Bangkok: Kingdom of Thailand.

Soil Map. 1975. Detailed Reconnaissance Soil Map of Buri Ram Province. Soil Survey Division, Department of Land Development. Province series: No.16. Bangkok: Kingdom of Thailand.

Soil Map. 1977. Detailed Reconnaissance Soil Map of Nakhon Ratchasima Province. Soil Survey Division, Department of Land Development. Province series: No.21. Bangkok: Kingdom of Thailand.

Guide to Archaeological Sites in the Mun River Basin

The soil mapping units are grouped into the following divisions:

- (1) levee floodplain and valley flat
- (2) semi-recent terrace and alluvial fan
- (3) low terrace
- (4) low to middle terrace
- (5) middle terrace
- (6) middle to high terrace
- (7) semi-recent to high terrace
- (8) dissected erosion surface, hill and footslope

2.3 Soil: Soil groups taken from the maps listed under 2.2 Terrace.

2.4 Soil Material Source: Entries are taken from the maps listed under 2.2 Terrace. Soil sources are grouped as follows:

- (1) recent river alluvium
- (2) semi-recent river alluvium
- (3) old river alluvium
- (4) calcareous river and lake deposit
- (5) sedimentary rock and metamorphic equivalent
- (6) igneous rock

2.5 Land Capability Classification for Rice: Taken from the following maps:

Land Capability Classification Maps 1973. Changwat Surin and Changwat Si Saket. Department of Land Development. Bangkok: Kingdom of Thailand.

Land Capability Classification Map 1977. Changwat Buri Ram. Department of Land Development. Bangkok: Kingdom of Thailand.

Land Capability Classification Map 1982. Changwat Nakhon Ratchasima. Department of Land Development. Bangkok: Kingdom of Thailand.

The Department of Land Development (Ministry of Agriculture and Cooperatives, Kingdom of Thailand) have classified the soils of Thailand according to their capability for upland crops and for paddy (wetland) rice. The five groupings and their limitations for rice cultivation are given below.

Group I: soils very well suited for paddy land, having no significant limitations for rice production

Group II: soils well suited for paddy land with slight limitations

Group III: soils moderately suited for paddy land with moderate limitations

Guide to Archaeological Sites in the Mun River Basin

Group IV: soils poorly suited for paddy land with severe limitations

Group V: soils generally not suited for paddy land

Limitations:

e: erosion; erosion hazard or past erosion damage

s: soil limitation in root zone; shallowness, unfavourable texture, stoniness or low fertility difficult to correct

m: lack of moisture for plant growth; insufficient rainfall

t: unfavourable topography; relative position or relief (micro or macro) limits use for crops and paddy in particular

f: flooding; flash floods or prolonged deep flooding

d: impeded drainage; excess water from high water table, slow permeability or slow surface drainage or all three

x: salinity or alkalinity

a: soil acidity

2.6 Visible water supply at site (1=yes/ 0=no): The presence or absence of a river or a definite line of positive vegetation marking the course of a stream and/or a marked river on the 1:50,000 map cover.

2.7 Visible water supply within 2 kilometres of site (1=yes/ 0=no): A radius measuring two kilometres was taken from the centre of the site to check for a second water source.

-> 3. Site Form

3.1 Shape: irregular or rectangular

3.2 Number of positive vegetation rings around site: A vegetation ring is a dark line of growth generally found on top of the earthworks surrounding the site.

3.3 Area: Calculated in hectares (1 ha. = 10,000 square metres) from the aerial photograph or from the 1:50,000 map if the photographic image was poor.

Guide to Archaeological Sites in the Mun River Basin

-> 4. Sites and their surroundings

4.1 Distance to nearest similar shape site: IRREGULAR is similar to IRREGULAR and RECTANGLE is similar to RECTANGLE. Distances were measured in kilometres from the centre of the site to the centre of its nearest similar neighbour.

4.2 Distance to nearest dissimilar shape site: IRREGULAR is dissimilar to RECTANGLE and RECTANGLE is dissimilar to IRREGULAR. Distances were measured in kilometres from the centre of the site to the centre of its nearest dissimilar neighbour.

4.3 Distance to nearest point 100m > site altitude: Distance to nearest altitude 100 metres greater than the altitude of the site. Taken as a topographical counterbalance to the low place measures expressed by the river proximity (2.6 & 2.7).

4.4 Altitude of nearest point 100m > site: altitude of previous measurement
